Maximize your mobility

Are you tired of running out of power? Let an Axiom battery juice you right up. Axiom offers a full line of batteries for today's popular notebook computers. An additional battery will extend your battery life and let you maintain extra mobility while you are at home, office, or on the go. Whether you need a replacement battery, or a spare, get powered by Axiom today.

## NOTEBOOK BATTERY

An Axiom notebook battery can be used to replace a worn battery or be used as a spare to allow more productivity when away from a power outlet. Adding an extra notebook battery to an open bay drive can double the power capabilities of the computer. If an extra drive bay is not available, carry an extra battery with you to swap out the batteries when the primary battery loses power.

### When is the right time?

Batteries lose power capacity with time and usage. If you notice your battery does not hold its charge like it used to, it may be time to get a replacement battery. Most batteries will last the average user about 1-2 years before it is time to replace the battery.

### Part numbers made easy.

Axiom wants to make sure you receive the right battery. If you know your OEM battery part number, just add a '-AX' to the end of it to get Axiom's part number. For example, if you need a '5081P' for a Dell Notebook, the Axiom part number would be '5081P-AX'.
